

## Post-Merger Transformation Focus, Pelindo's Performance Is Increasing

Admin -- 17 November 2022

Jakarta, 17 November 2022 - One year after the merger, PT Pelabuhan Indonesia (Persero) or Pelindo continues to improve in improving port services, this is done to encourage transformation both within the Company and the national economy.

In the third quarter of 2022, Pelindo managed to record a positive trend in operational performance. The flow of containers reached 12.8 million TEUS, an increase of 2% compared to the same period in 2021. Likewise, the realized flow of goods amounted to 116 million

tonnes, growing 6% compared to the previous year.

Meanwhile, the flow of ships in and out of ports reached 882 million GT or grew 1% compared to the previous year. On the other hand, passenger flow reached 10.9 million people, an increase of 98% compared to the previous year, while the easing of the policy on limiting community mobilization was the main factor in increasing this passenger flow.

"With the continuous transformation and improvement of services, we hope that the positive trend of Pelindo's performance will continue and the company's targets that have been set until the end of 2022 can be fulfilled," said Pelindo's Main Director, Arif Suhartono.

The results of Pelindo's post-merger transformation have begun to be seen in the increased performance and productivity of container loading and unloading at a number of container terminals. Where the increase in loading and unloading productivity is measured by the parameter of boxes per ship per hour (BSH) and the reduction in port stay or ship berthing time at the port is measured by the number of days.
