

Prime, Pelindo Subholding Working on Export of 29 Tons of Marine Products to China

Admin -- 30 March 2023

Jakarta, March 29, 2023 _ PT Pelindo Solusi Logistik or SPSL as the Pelindo Port SOE Subholding continues to make efforts to boost Indonesian exports amidst the dynamics of the global economy. One of them is through the support of the initial export shipment of 29 tons of frozen Layur fish to China.

SPSL participates in boosting the Indonesian economy, among others by supporting the delivery of Indonesia's leading export commodities to the Non-Industrial Revolution (IR) 4.0 sector, namely the fishing industry.

"After the Pelindo merger, SPSL continues to make efforts to create value creation and is committed to continuing to provide service excellence. Through one of its Subsidiaries, namely PT Multi Terminal Indonesia, SPSL provided support for the initial export shipment of 29 Tons of frozen Layur Fish (*trichiurus lepturus*) in Cilacap, Central Java to China." said the Main Director of SPSL, Joko Noerhudha.

The initial export of 1.3 billion owned by PT Prestasi Melimpah Cilacap has added to the list of products exported by Indonesia and has become a trigger for other companies to export and supports the creation of domestic products that can compete on the global stage. In addition, this export activity is expected to be able to increase the economic level of the local community, as well as reduce the unemployment rate so that it can gradually improve the quality of the Indonesian economy as a whole.

Joko Noerhudha added, the company's support for the initial export shipment of 29 Tons of Frozen Layur Fish is a form of logistics service for the SPSL Group, namely a cold chain that collaborates with all existing logistics players from upstream to downstream, with competitive advantages presented through connectivity to ports so that they can present an end-to-end and integrated national logistics ecosystem network to provide more effective and efficient services.

"SPSL continues to be optimistic that the company's performance can continue to grow in line with the Government's optimism for national economic growth. This condition is expected to encourage development projects in various industries to revive so that it has an impact on the company's revenue opportunities, G
"concluded Joko Noerhudha.s
